Education:

University of Washington, Seattle, WA (GPA:3.97/Annual Dean's list)

- Bachelor of Science, Electrical Engineering, (Honors), College of Engineering Expected Jun 2020
- Bachelor of Science, Computer Science, (Honors), College of Arts and Sciences Expected Jun 2020
- Bachelor of Science, Mathematics, (Minor), College of Arts and Sciences Expected Jun 2020
- Master of Science, Computer Science, College of Arts and Sciences Expected Jun 2021

Work Experience:

UW CSE 455 (Computer Vision) Teaching Assistant, Seattle, WA

Sep 2019 – Present

Intern, DJI Technology, Shenzhen, China

Jun 2017 – Aug 2017

- Worked on automatic robot battle of vehicles with TX series onboard and DJI Manifold with Guidance
- Implemented functions such as take-off, tag detection, and refilling to localize drone and communicate
- Applied SLAM to mapping and localize, and built a top-level state machine to strategize and navigate the robot

Research Projects:

Grasp Planning – UW Robotics and States Estimation Lab

Dec 2018 – Present

- Implement a novel approach that combines data-driven and traditional method to synthesize grasp pose
- Prototype RL, IL, and MPC with PyBullet environment to map observed points directly to 6D pose increments in task space
- Jointly optimize reachability-aware motion and grasp planning in cluttered scene by extending the CHOMP framework
- Research extensively on traditional methods and data-driven methods in grasp synthesis

DeepIM Tracking – UW Robotics and States Estimation Lab

June 2018 – Dec 2018

- Tested extensively DeepIM on YCB datasets and achieved robust results trained on synthetic data only
- Improved network training stability, pose distribution and occlusion generation
- Extended DeepIM in real-time tracking for occluded scene in YCB and built AR demos
- Worked on robot kinematics to build generalized vision system that can track robot arm

Depth and Flow – Computer Vision Course Project

March 2018 – June 2018

- Investigated a few deep learning methods results for jointly 3D geometry predictions such as depths, flow, and egomotion
- Explored unsupervised structures and ideas such as SfMlearner and MonoDepth and analyzed them on a robotic setting

SoundScape – UW Adaptive Computing Machines and Emulator Lab

March 2018 – June 2018

- Designed a sound processing pipeline from scratch for modelling the acoustics of a train whistle

Manipulation – UW Robotics and States Estimation Lab

Aug 2017 – March 2018

- Solved a manipulation task with PoseCNN, which enables Baxter to manipulate daily objects
- Experimented with camera models, robot kinematics, Baxter SDK and ROS packages for tracking and control

Leadership and Involvement:

Advanced Robotics at the University of Washington – Computer Vision Lead & Drone Lead

Sep 2016 – Feb 2018

- Managed a team of 10 students to design computer vision tools for our robots in a competition RoboMasters hosted by DJI.
- Perform system integration of controls, navigation and serial communication

Skills and Honors:

Programming Languages: Java, C++/C, Python, Matlab

Platform & Frameworks: ROS, Ubuntu, ARM, Arduino, Nvidia TX Series, STM32

Tools: Git, CMake, OpenCV, DJI_Guidance, Bash, Latex, Tensorflow, Pytorch, MXNet, OpenGL, CUDA, Qt

Selected Courses: Computer Vision, Deep Learning, Artificial Intelligence, Graphics, Robotics, Algorithms, Numerical Analysis, Linear Analysis, Convex Analysis and Optimization, Embedded Systems, Control Theory, Digital Signal Processing, Statistical Learning, High-Dimension Statistics, Robust Machine Learning

Scholarships: Tau Beta Pi Scholarship 2017-2019, Lawrence & Lucille Frey Endowed Electrical Engineering Scholarship 2017-2018, Patricia G. Lynch and Theodora & Eugene Russell Memorial Computer Science Scholarship 2018-2019
